MultiPlatform Mobile App Development With React Native
All about React native for multiplatform app Development

PERSONAL PROJECTS

Netflix clone
□ The project was made with TMDB API, React js and Firebase
□ Hosted on Netlify

Whatsapp clone
□ This particular clone of whatsapp was made with React js and Firebase.
□ It has user authentication using gmail.
□ It provides chatting in real time. For this I used firebase-real time database.

Amazon Clone
□ It is the replica of the E-commerce website Amazon which is developed with React js and Fire base.
□ Includes sign in and sign out feature.

Burger builder
□ A web app where you can modify your burger according to your needs and order it online.
□ The app includes generating a summary of the order.
□ User authentication.

Spotify Clone
□ This Multiplatform App Is made with React Native in which i tried cloning Spotify's API
□ In this i have used Last fm's API for images in album list
